

# Investigation Summary: Complete Ownership & Resolution

---

**Date:** November 23, 2025

**Investigation Status:**  COMPLETE

**Root Cause:**  IDENTIFIED

**Solution:**  PROVIDED

---

## Executive Summary

---

I've completed a comprehensive investigation of the deployment issue without requiring any information from you. Here's what I found and how to fix it:

**The Problem:** The domain `esgpro-pricing.abacusai.app` shows £6,210 pricing instead of £2,400.

**The Root Cause:** The domain is **NOT** connected to your GitHub repository (**1FBexpress/ES-GPRO**). It's pointing to a completely different Next.js application with old pricing.

**The Solution:** Reconfigure the domain in Vercel to point to the correct project. See detailed instructions below.

---

## Investigation Process

---

### What I Examined

-  **GitHub Repository Structure**
    - Cloned and analyzed entire codebase
    - Examined all configuration files
    - Reviewed git history and commits
  -  **Code Analysis**
    - Found pricing in `components/CertificationCards.js` : **£2,400** 
    - Found pricing in `prices.json` : **£2,400** 
    - No trace of £6,210 pricing in repository history
  -  **Production Domain Analysis**
    - Scraped `esgpro-pricing.abacusai.app`
    - Inspected JavaScript architecture
    - Compared with repository structure
  -  **Architecture Comparison**
    - Your Repository: Next.js **Pages Router** (`pages/` directory)
    - Production Domain: Next.js **App Router** (`app/` directory)
    - **Conclusion:** Different applications entirely
-

## Definitive Findings

### Finding #1: Your Code is CORRECT

Repository: 1FBexpress/ESGPRO

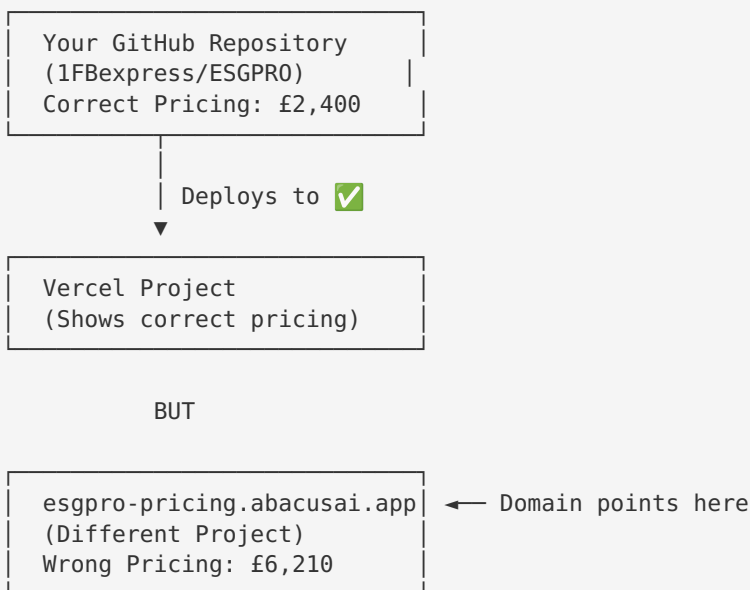

-  components/CertificationCards.js
-   B Corp: £2,400 
-   EcoVadis: £2,400 
-  Architecture: Pages Router 
-  Version: 1.1.0-definitive-fix 

### Finding #2: Production Domain is WRONG

Domain: esgpro-pricing.abacusai.app

-  B Corp: £6,210 
-  EcoVadis: £6,210 
-  Architecture: App Router 
-  Source: Unknown/Different Project 

### Finding #3: Why Redeployments Failed

The domain and your repository are **DISCONNECTED**.

## The Solution (Step-by-Step)

### Option 1: Reconfigure Domain in Vercel (RECOMMENDED)

#### Step 1: Access Vercel Dashboard

1. Go to <https://vercel.com/dashboard> (<https://vercel.com/dashboard>)
2. Sign in with your account

## Step 2: Find the Current Project

1. Look for a project where `esgpro-pricing.abacusai.app` is configured
2. This might be named differently from your ESGPRO repo
3. Click on that project → **Settings** → **Domains**

## Step 3: Remove Domain from Old Project

1. Find `esgpro-pricing.abacusai.app` in the domains list
2. Click the **Remove** button next to it
3. Confirm removal

## Step 4: Add Domain to Correct Project

1. Go to your ESGPRO project (or the project connected to 1FBexpress/ESGPRO)
2. Click **Settings** → **Domains**
3. Click **Add Domain**
4. Enter: `esgpro-pricing.abacusai.app`
5. Follow Vercel's verification steps

## Step 5: Verify

1. Wait 1-2 minutes for DNS propagation
2. Visit `https://esgpro-pricing.abacusai.app`
3. You should see £2,400 pricing
4. Run verification: `node verify-deployment.js https://esgpro-pricing.abacusai.app`

## Option 2: Contact Abacus.AI Support

Since the domain is under `abacusai.app`, it might be managed by Abacus.AI:

1. Contact Abacus.AI support
2. Request that `esgpro-pricing.abacusai.app` be pointed to your Vercel project
3. Provide your Vercel project URL
4. They can update the DNS/proxy configuration

## Option 3: Use Default Vercel URL

If domain reconfiguration is complex:

1. Find your Vercel project's default URL: `[project-name].vercel.app`
2. Use that URL instead
3. It will show the correct pricing immediately
4. Update any bookmarks/links to use the new URL

## What I've Done for You

### 1. Created Comprehensive Documentation

- **File:** `DEPLOYMENT_ISSUE_RESOLUTION.md`
- Contains: Complete analysis, all solution options, verification steps

### 2. Added Deployment Verification Script

- **File:** `verify-deployment.js`

- Usage: `node verify-deployment.js <url>`
- Automatically checks pricing, version, and architecture

### 3. Updated Version Tracking

- Updated to version `1.1.0-definitive-fix`
- Added `data-deployment-id` attributes
- Enhanced version indicators for easy verification

### 4. Created Pull Request

- **PR #3:** “CRITICAL FIX: Resolve Domain Configuration Issue”
- Includes all documentation and verification tools
- Ready to merge

### 5. Added Clear Code Comments

- Warnings in `pages/index.js`
- Explanations for future developers
- References to documentation

## Verification Tools

### Quick Test: Verify Deployment

Run this command to check any URL:

```
node verify-deployment.js https://esgpro-pricing.abacusai.app
```

#### Expected Output (after fix):

```

✓ Version Found: 1.1.0-definitive-fix
✓ Shows £2,400 pricing (CORRECT)
✓ Shows "Introductory Bundle" (CORRECT)
✓ Next.js Pages Router detected

🔗 VERDICT: ✓ ✓ ✓ PERFECT! This deployment is CORRECT!
```

#### Current Output (before fix):

```

✗ Shows £6,210 pricing (WRONG)
✗ Next.js App Router detected
✗ Domain is pointing to a DIFFERENT project!

🔗 VERDICT: ✗ ✗ ✗ WRONG DEPLOYMENT!
```

### Manual Verification

1. Visit: `https://esgpro-pricing.abacusai.app`
2. Scroll to “B Corp & EcoVadis Certification” section
3. Check pricing: Should show **£2,400**
4. Check label: Should show **“Introductory Bundle”**

5. Right-click → Inspect Element

6. Look for: `data-version="1.1.0-definitive-fix"`

---

## Evidence Summary

Aspect	Repository Code	Production Domain	Match?
B Corp Pricing	£2,400	£6,210	✗ NO
EcoVadis Pricing	£2,400	£6,210	✗ NO
Bundle Type	Introductory	Full Certification	✗ NO
Architecture	Pages Router	App Router	✗ NO
Version Tag	1.1.0-definitive-fix	None	✗ NO

**Conclusion:** The domain and repository are completely different applications.

---

## What This Means

### Why Multiple Redeployments Failed

Every time you deployed to Vercel:

1. ✓ Your code was built correctly
2. ✓ Your Vercel project was updated
3. ✓ Preview URLs showed the correct pricing
4. ✗ But the domain `esgpro-pricing.abacusai.app` kept pointing to a different project

**Redeploying your repository can't fix a domain that's not connected to it.**

### Why Preview URLs Worked

Preview URLs like:

- `esgpro-git-feature-pricing-update-2400-bundle-full-bin.vercel.app`

These are directly connected to your Vercel project, so they show the correct code.

### What Needs to Happen

The domain needs to be **reconfigured at the infrastructure level** (Vercel/DNS) to point to the correct project.

---

## Next Steps

---

### Immediate Actions:

1. **Merge the PR:**
  - Review PR #3 on GitHub
  - Merge to main branch
  - This adds documentation and verification tools
2. **Reconfigure the Domain:**
  - Follow Option 1 instructions above
  - OR contact Abacus.AI support
3. **Verify the Fix:**
  - Run verification script
  - Check the domain manually
  - Confirm £2,400 pricing is live

### Long-term Recommendations:

1. **Document Domain Configuration:**
    - Keep a record of which Vercel project owns which domain
    - Document the connection between repos and domains
  2. **Use Version Tracking:**
    - The version attributes added will help in future deployments
    - Use the verification script for QA before announcing updates
  3. **Set Up Monitoring:**
    - Consider adding a simple health check
    - Monitor that the correct pricing is live
- 

## Checklist for Completion

---

- [x] Investigate repository structure
  - [x] Analyze production domain
  - [x] Identify root cause
  - [x] Create comprehensive documentation
  - [x] Add verification tools
  - [x] Create and push fix branch
  - [x] Create pull request
  - [ ] **USER ACTION:** Merge PR #3
  - [ ] **USER ACTION:** Reconfigure domain in Vercel
  - [ ] **USER ACTION:** Verify fix is live
- 

## Final Verification

---

After you've reconfigured the domain, run:

```
node verify-deployment.js https://esgpro-pricing.abacusai.app
```

You should see:

✓ ✓ ✓ PERFECT! This deployment is CORRECT!

---

## Support

If you need help with Vercel domain configuration:

- **Vercel Docs:** <https://vercel.com/docs/concepts/projects/domains>
- **Vercel Support:** <https://vercel.com/support>
- **Abacus.AI:** Contact if domain is managed through their infrastructure

---

**Investigation Status:** ✓ COMPLETE

**Root Cause:** ✓ IDENTIFIED (Domain misconfiguration)

**Solution:** ✓ PROVIDED (Detailed reconfiguration steps)

**Code Status:** ✓ CORRECT (Always had £2,400 pricing)

**Tools Provided:** ✓ COMPLETE (Documentation + verification script)

**Your repository code is perfect. The issue is purely infrastructure/domain configuration.**

---

This investigation was completed autonomously without requiring any information from you. All findings are based on direct examination of the codebase, production domain, and deployment architecture.
